

FELIPE FAJARDO

Bogotá, Colombia · +57 304 538 2746 · felipefajardoquintero@gmail.com · github.com/FelipeFQ · linkedin.com/in/felipe-fajardo-quintero

PROFESSIONAL SUMMARY

Junior data engineer with hands-on experience building data pipelines, ETL processes, and analysis-ready datasets using Python and Pandas. Designed and implemented a multi-season sports data pipeline from raw ingestion to feature-engineered output — including data quality validation that caught and corrected a leakage issue before it could corrupt downstream modeling. Mentored informally by a senior data engineer. Fluent in English. 100% remote ready.

TECHNICAL SKILLS

Python · SQL · Pandas · NumPy · ETL Processes · Data Pipeline Design · Feature Engineering · Data Quality & Validation · EDA · Scikit-learn · Jupyter Notebook · Git · GitHub · Linux · OOP · Statistics

PROJECTS

NBA Game Outcome Prediction Pipeline — Python · Pandas · NumPy · Scikit-learn · Jupyter

In Progress

github.com/FelipeFQ/NBA-win-prediction

- Built a complete data pipeline across 9 NBA seasons (2017–2026): raw data extraction from Kaggle → transformation and cleaning → feature engineering → analysis-ready output for ML modeling
- Implemented data quality validation at the transformation stage: detected rolling averages calculated without shift(1), which were leaking future data into the feature set — corrected before modeling to preserve pipeline integrity
- Engineered domain-specific features (fatigue indicators, home/away performance splits, head-to-head historical records) using only pre-game information — strict separation between data available at prediction time vs. target information
- Scoped dataset deliberately to post-2017 data to reduce noise from incomplete advanced metrics tracking in earlier seasons — decision documented in README
- Modeling phase in progress: Logistic Regression, Random Forest, XGBoost

Kaggle Titanic — ML from Disaster — Python · Pandas · Scikit-learn · Seaborn · Jupyter

github.com/FelipeFQ/Titanic-ML-from-Disaster

- End-to-end data project: ingestion, wrangling, missing data handling, categorical encoding, feature engineering, EDA and multi-model comparison
- Developed with guidance from a senior data engineer — reinforced practical standards for data transformation and validation

Alien Invasion — Python & OOP — Python · Pygame · OOP · Git

github.com/FelipeFQ/Alien-invasion-project

- Capstone from Python Crash Course; built with architectural discipline: single responsibility, meaningful inheritance, modular structure — applied as a design tool, not a checkbox

EXPERIENCE

Customer Service Representative — Foundever · Remote, Bogotá

May 2021 – Sep 2023

- Handled 50–120 inbound English calls daily for FedEx; managed complete case resolution from intake to close — lost packages, late deliveries, pickup scheduling, billing disputes
- Maintained average handle time under 3:30 min with consistent positive CSAT scores
- Owned escalations end-to-end without supervision; coordinated directly with FedEx stations
- Operated bilingually (English/Spanish) prioritizing outcome over process

EDUCATION & CERTIFICATIONS

Platzi — Data Science & Python Development Track

Aug 2024 – Present

19 courses completed: Data Engineering Fundamentals · Database Fundamentals · Machine Learning Fundamentals · Python for Data Science · Python: Comprehensions, Functions & Error Handling · Statistics & Probability · Software Engineering Fundamentals · Git & GitHub · Terminal & Linux · Virtual Environments with Anaconda & Jupyter

Universidad Nacional de Colombia — Electronic Engineering / Fine Arts

2018 – 2020

Studies not completed
